

Crop Candy

As per Act 36 of 1947: B4638

Agent Details

Manufactured by: Skala Biotek
Reg no: 2012/103797/07
13 Helling Street | Protea Hoogte | Brackenfell | 7560
0861 106 566 | 076 261 6853

BENEFITS

CROP CANDY is a natural combination of L-amino acids and metabolites from plant origin with 7.5% Carbon (C), 7.5% protein and 200mg/L sulphur.

CROP CANDY has a Carbon (C): nitrogen ratio of 4:1, which makes it an excellent energy source for plants and soil microbes, especially in stress situations.

Plants manufacture their own amino acids, which is necessary for the metabolic process but during stress situations (herbicides, cold and heat) the optimal amino acid synthesis is suppressed.

CROP CANDY application optimises the amino acids level in plants.

Due to the amino acid content as well as the 2% fulvic acid fraction, **CROP CANDY** has a chelation effect or fertilization element which assists with the ingestion of micro-elements.

CROP CANDY contains 7.5% plant protein that releases nitrogen over a longer period of time whilst the proteins are broken down.

DIRECTIONS FOR USE:-

CROP CANDY can be mixed and applied with liquid fertilizers.

Soil application:

Use 1 – 2L **CROP CANDY** /ha in the plant fore.

Foliar application:

CROP CANDY is compatible with products that contain kelp as well as most micro-elements.

Foliar feeds:

Use 1 – 5L **CROP CANDY** p/ha. Use of an adjuvant sticker is recommended.

CROP CANDY is suitable to be applied with irrigation.

Energy source for plants and microbes
